<p><b>Target group for transnational cooperation</b> (click the right answer):</p> <p><i>(ONLY final beneficiaries, NO stakeholders)</i></p>	<ul style="list-style-type: none"> <li>□ Long term Unemployed</li> <li>□ Persons not actively at work – e.g. Young people under 25 years old (Incl. school or high school/university)</li> <li>□ Employed</li> <li>□ self Employed</li> <li>□ Elderly persons (+ 50)</li> <li>▪ Specific target groups: <ul style="list-style-type: none"> <li>▪ Disadvantaged groups (NEET – not in employment, education and training) <ul style="list-style-type: none"> <li>○ Immigrants</li> <li>○ Ex-offenders</li> <li>○ Women</li> <li>○ Persons with mental or physical disabilities</li> <li>○ Employees in Social enterprises</li> </ul> </li> </ul> </li> </ul>

**Brief description of the Transnational cooperation:**

**1. Problems to be solved** (justify the need of the transnational cooperation)

The relationship between underprivileged groups and ICT is what can be called a worst-case scenario. These groups have low access to ICT, low usage levels and possess few digital skills. Most underprivileged individuals are part of a homogeneous ICT-poor network of other underprivileged individuals. They have few weak ties like colleagues, acquaintances or distant friends but many strong ties like nearby family and close friends. As a consequence, they have very few opportunities of use. Within their social network underprivileged groups rarely have the necessary material, cognitive and social resources to use ICT in a strategic way. Why should I email if there is no one to whom I can send an email? An additional barrier is that underprivileged groups rarely transcend this homogeneous but familiar social network because of too many negative experiences in the past. The continuous rejection by society, for example at the level of education or employment, has led to a loss of confidence, low levels of self-esteem, insecurity and the constant fear for rejection. Furthermore, learning barriers – low self-esteem, lack of confidence, learning difficulties, negative school experiences – prevent them from participating in education. The entrance barrier of formal education institutions is too high for underprivileged groups. This implies that other, more suited, places need to be found if one wishes to provide alternative ways of ICT-access to underprivileged groups.

The ‘DigiTalent’ project aims to organize, validate and exchange the competencies available at an individual and community level to increase and enhance digital competencies amongst vulnerable groups via a bottom-up approach (eg. NEET, not in employment, education and training). It focuses on the project implementation of two best practices in the United Kingdom (Digital Champions program, Making IT Personal project) and aims to adapt these projects to the context in Flanders.

**2. Objectives to be achieved**

The ‘DigiTalent’ project consists of two tracks. The project aims to increase the digital competencies amongst vulnerable groups by 1) instigating individuals to become a digital champion and hence share their knowledge in their immediate social environment; and 2) motivating vulnerable groups to become digital champions themselves and hence, extend their participation in informal learning opportunities in civil society organisations through a certain accreditation and recognition of these competences.

**3. Main transnational activities** (as provisionally planned, to be confirmed with partners)

The main transnational activities will consist of 1) knowledge exchange via a close working relationship with the two projects mentioned (Digital Champions program, Making IT Personal program); 2) a number of study visits by the Flemish partners to the UK programs that will be implemented in the Flemish context; and 3) a number of working and evaluation visits from the transnational partners to Flanders.

**4. Planned outputs, deliverables, results of TNC; expected outcomes (effects)**

So far the ‘DigiTalent’ project consists of 1) an extensive academic case study on the adaption of Digital Champions program and Making IT Personal program to the context of Flanders; 2) the realization and implementation of a communication campaign to activate individuals and intermediaries to exchange and share their digital competencies with others; in this regard a pilot project will be realized with the following project partners: Digidak, Digitaal.Talent@Gent, Digipunten Antwerp; and 3) the creation of an centralized online platform that will inform and provide support to individuals and intermediaries.

**5. Useful and additional remarks:**
